TAC Announces New Executive Director

Sam DiGiandomenico is the new executive director of [Technology Accreditation Canada \(TAC\)](#) – a world class, national accreditation model for the engineering technology and applied science profession which is preparing to launch full operations in the coming weeks.

DiGiandomenico, a University of Western Ontario graduate and former member of TAC’s board of directors, served as OACETT registrar for the past 14 years as well as for other professional organizations. He also has experience with academic institutions.

Having been in the TAC executive director role since Jan. 2, 2015 he is excited about heading up an organization poised to change the face of accreditation for engineering technology and applied science programs at post-secondary institutions.

“I really believe in national accreditation and that the colleges contribute greatly to our economy and well-being. I sincerely hope that TAC can play an active part in assisting our colleges in fulfilling their mandate,” added DiGiandomenico.

He values the dedication from everyone associated with TAC and particularly from the TPC provinces (Alberta, British Columbia, Ontario and Saskatchewan). He looks forward to his involvement with the 2015 board which continues to include representation from academia.

Incorporated in 2013, TAC will officially begin accrediting engineering technology and applied science programs at post-secondary educational institutions this year.
